

DominoIPTV™

for Lotus Notes & Domino

Live Television and Archived Video Delivered to the Desktop

Imagine a cost effective network that will supply live television and archived video to every computer monitor and display screen in your organisation.

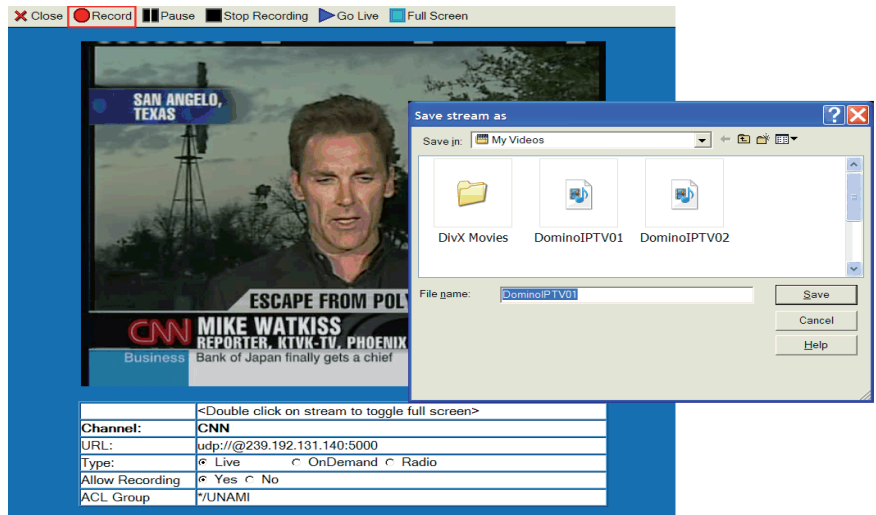

Domino Telecom can provide this IPTV reality today and achieve the twin goals of reducing costs and increasing productivity.

Until recently delivering television, video and radio throughout an office or accommodation area relied on cable networks that were expensive, inflexible and resulted in video of variable quality. DominoIPTV offers a comprehensive alternative to these older technologies using the latest in internet television - IPTV.

IPTV Applications

Great technology, but what's the use of it?

In-House TV is a great tool if the CEO wants to «get the message out» to all employees simultaneously. Is there great news to communicate? Maybe a pep talk is urgently needed following a corporate disaster? Just plug a video camera into our AV Encoder and top management can make a live presentation to everyone's desktop and selected communal area screens. Now that's a cost effective and efficient way of providing vital and timely information to people who need it.

On-The-Spot Video delivers live TV from the scene of the accident, battlefield, wherever ... Just uplink to satellite from a mobile unit and downlink for delivery to the desktops of decision makers at mission headquarters.

Video-On-Demand (VoD) delivers stored training and other video material direct to user desktops. In-House TV broadcasts can be played at any time.

Broadcast TV (CNN, BBC World, Bloomberg, Sky News, Al Jazeera, etc.) broadcast to user desktops, communal areas and accommodation blocks.

Will it kill the network?

Surprisinglyno! Each video stream will require around 4 Mbps of bandwidth. Multicasting lets unlimited users watch the same channel.

What's Needed for an IPTV System?

TV Gateway

Connects to one or more satellite dishes or terrestrial antennae. Incoming signals may be free-to-air or encrypted and are distributed directly across the LAN.

AV Encoder

Connects to a professional or consumer video camera, DVD player or Video-on-Demand server.

Video-on-Demand (VoD) Server

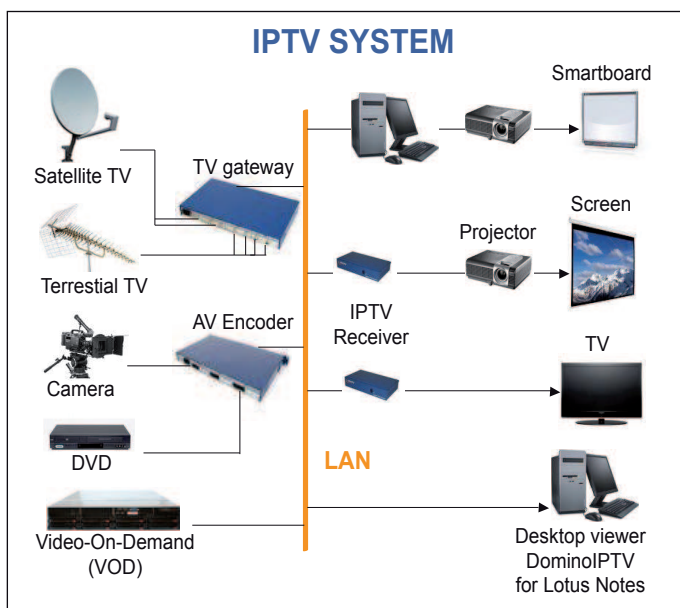

Stores video content. Provides scheduled playout of video content, electronic program guide and organization specific customisable interface module.

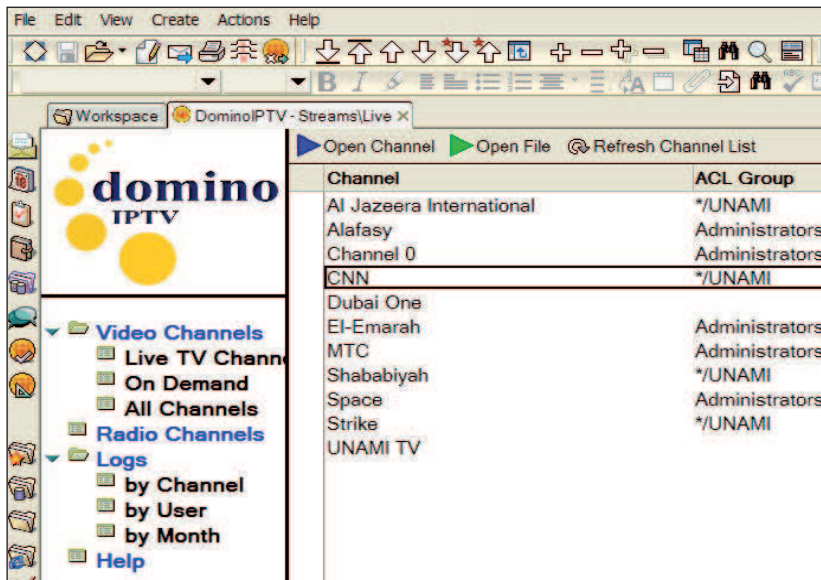

IPTV Receiver

Connects any TV or display directly to the LAN.

Desktop Viewer

Play live and on-demand TV and video streams on the PC. DominoIPTV Viewer gives enhanced functionality for Notes users.

DominoIPTV for Lotus Notes

Benefits for administrators and Lotus Notes users:

ADMINISTRATORS

Use Lotus Notes to administer your IPTV system:

- Leverage existing investment in Lotus Notes
- Automatic update of channel list
- Control which streams to publish
- Control who can watch what
- ACL based filtering of channels
- Control which channels can be recorded
- Log report
